Getting started

BESPA Expert Systems · one subscription, ten apps

1. Sign in

1. Find your licence key in the email from **sales@bespa.online** that confirmed your subscription.
2. Open any app below. The first time, it asks for your email and licence key. Keep the key private.
3. On the Consulting Firm plan, each of up to five named users signs in with their own email.

2. Open an app, and read its manual

FAMILY	APP	ADDRESS	MANUAL
Structural Design	RC Frame Design	rcframedesign.bespa.online	PDF
	Steel Frame Design	steelframedesign.bespa.online	PDF
Digital Terrain Modelling	Contouring · Land Preparation · Estate Layout · Geometric Road Design (Lite) · Drainage Design	dtm.bespa.online	PDF
Road Design and Estimation	Road BOQ Estimator	road-estimator.bespa.online	PDF
	Geometric Design of Roads	road-design.bespa.online	PDF
	Box Culvert Design	box-culvert.bespa.online	PDF

All the manuals are listed at **bespa.online/manuals**. They are always the current versions, so bookmark that page rather than saving a copy.

3. Your first design

1. Read the manual's "Getting started" or "Before your first run" section. It takes ten minutes.
2. Where the app or its manual offers a worked example, run it first and compare your result with the manual's.
3. Then run your own project. If a check fails, the app says which one and why.

4. Help

Email **info@bespa.online** with the app's name and, where the app shows one, the project id or design hash.

BESPA Expert Systems · bespa.online · For the preliminary design and feasibility stage of civil infrastructure projects. Its outputs are engineering aids, not certified designs: a qualified engineer must check and sign off every output before it is issued for construction.
